RED LIGHT OR GREEN LIGHT?

**What Disconnected Systems
Do to Your Business**

RED LIGHT OR GREEN LIGHT?

What Disconnected Systems
Do to Your Business

When accounting, HR, payroll, and internal systems don't work together, operations become stop-and-go.

Small disconnects create:

- Duplicate data entry
- Delayed onboarding
- Slow reporting
- Frustrated teams

THE RESULT

Work keeps stopping.

RED LIGHT OR GREEN LIGHT?

What Disconnected Systems
Do to Your Business

A new hire joins the company, but there's stop-gaps between HR, Payroll, and IT because systems aren't connected.

This means:

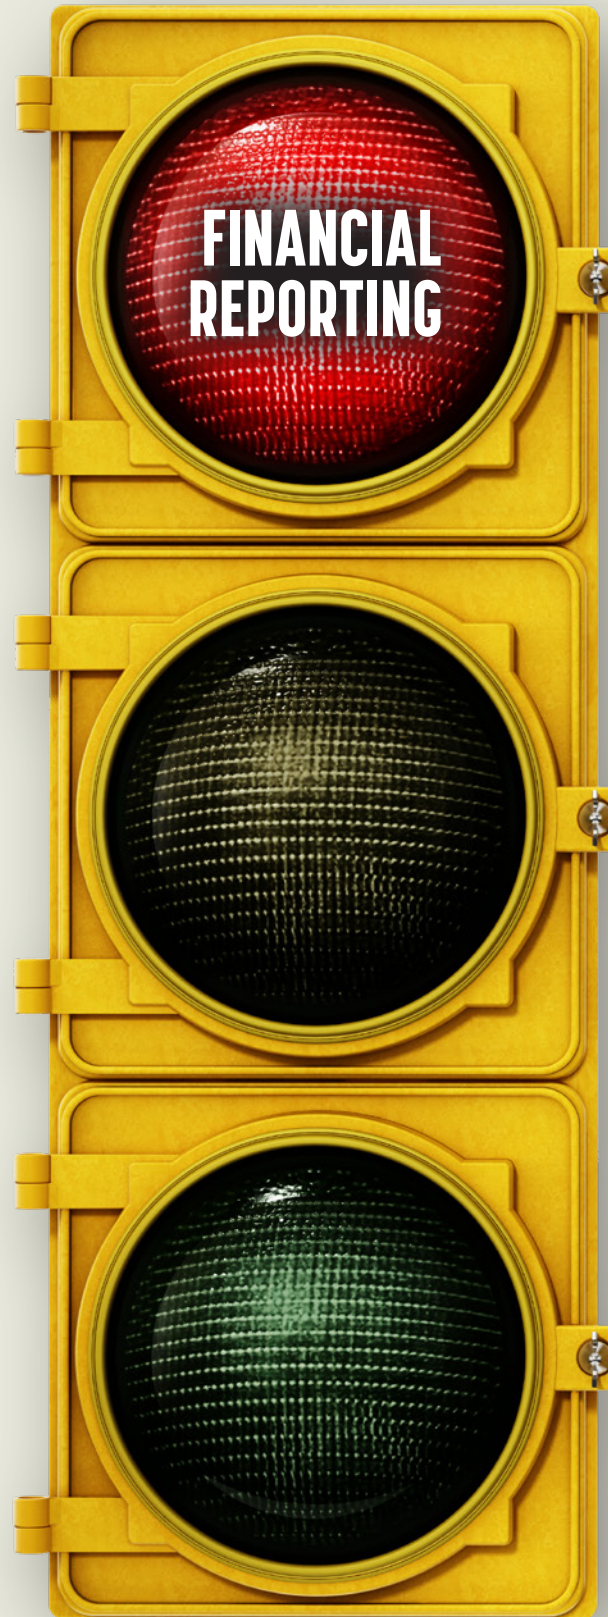

- HR enters employee information
- Payroll must re-enter the same data
- IT receives the request late
- System access takes days

THE RESULT

The employee waits.
The team slows down.

RED LIGHT OR GREEN LIGHT?

What Disconnected Systems
Do to Your Business

Leadership needs an updated financial report, but data lives in multiple systems, feeding multiple spreadsheets.

So you have to:

- Export payroll reports
- Reconcile accounting data
- Toggle between different files to find the right numbers

THE RESULT

Reporting takes longer than it should.

RED LIGHT OR GREEN LIGHT?

What Disconnected Systems
Do to Your Business

HR to Payroll to Accounting to Reporting
all flows perfectly with no gaps in time.

When systems are aligned:

- HR updates sync with payroll
- Payroll feeds accounting systems
- Reports update faster and more accurately

THE RESULT

Teams spend less time chasing
data and more time executing on
high-value tasks.

What Disconnected Systems
Do to Your Business

What Green Light Operations Look Like

When your systems work together, teams stop re-entering the same information across multiple platforms. New employees arrive on day one with the access they need to start working immediately. Financial reports are produced faster and require fewer corrections along the way. Most importantly, leadership gains the clarity needed to make decisions with confidence.
